Drive green, drive GreenPlan

Global warming is a global problem with a local solution. As you know, vehicles are among the biggest sources of CO₂ emissions. That's why we offer a programme designed to help you control the CO₂ emissions from your own fleet: GreenPlan.

How can you make a difference?

GreenPlan will inspire and challenge you to think green. The aim is to highlight where to focus your efforts to reduce CO₂ emissions. As an extra bonus, you will often find that a tank lasts longer – saving you money.

Get a picture of the existing CO₂ emissions produced by your fleet

You can use GreenPlan to work out the existing CO₂ emissions produced by your fleet. We recommend that you use the analysis as a basis for formulating a plan of action. The aim of the plan should be to create a vehicle policy that meets the needs and wishes of your company. In other words, GreenPlan can help you create the right balance in your fleet.

Reduce fuel consumption by 7-10 %

Anyone with a company car can benefit from our driving courses. The courses teach you how to drive in the most environmentally friendly and energy efficient way possible, considerably reducing your fuel consumption as well as CO₂ emissions. For fuel alone, cost savings of 7-10% are typical.

Do you want your fleet to have a green profile?

Working closely with you in a highly targeted way, we can follow up the results and savings delivered by GreenPlan, giving your company's fleet a greener profile into the future. The follow-up is done in LeasePlan Online.

The EU is working to reduce CO₂

Denmark is working with its EU partners to reduce CO₂ emissions. The idea of green taxes is to encourage individuals and companies to consider the environment – and so reduce emissions from all sources including vehicles. By 2015 at the latest, vehicle manufacturers have been set the target of reducing CO₂ emissions to 130 g/km. If they miss the target, manufacturers will have to pay a CO₂ tax for every vehicle they sell.

The green ownership tax is added to your employees' tax calculation

Please note that as of 2010, the green ownership tax is added to the taxable value of your employee's company car. That means that the

less CO₂ the company car emits, the less tax an employee has to pay.
