Telematics

Technology to drive efficiency
and cost reduction

Telematics

Why use Telematics?

Telematics provides class-leading technology giving real-time visibility across your fleet operations. It is part of our integrated suite of commercial vehicle fleet management tools, designed to future-proof your business-critical operations.

With businesses always looking to improve fleet efficiencies, ensuring driver safety and managing costs, the ability of Telematics to provide real time monitoring makes these aspirations achievable.

Telematics provides actionable insight to drive improvements in efficiency and safety into the in-life operation of your vehicles.

Customers using LeasePlan's Telematics have seen significant driver behavioural improvements which have led to cost savings.

Our clients are seeing tremendous benefits. 55% of users surveyed report Fuel savings, 49% see a reduction in speeding events, 43% see a reduction in vehicle related accidents and 39% see a reduction in the overtime hours claimed*.

By using Telematics you are able to offer your customers a highly efficient service focused on professional fulfilment from safer drivers while delivering on your commitment to provide accurate timings.

Our Telematics solution delivers on innovation and data, while supporting HMRC regulations around private vehicle usage and business mileage reporting.

Telematics and you

LeasePlan, together with our partner the RAC, has developed Telematics, a connected vehicle platform empowering you with future technology now.

Telematics is a powerful real-time tool designed to help you manage business-critical operations by improving safety and efficiencies whilst driving down costs.

The Telematics device can be plugged into a vehicle or hard wired with over the air configuration. Once fitted, you can better monitor the activities of your fleet vehicles to ensure cost-effective, safe and compliant operations.

Reporting can be delivered to your inbox or reviewed in real-time using cloud-based technology.

Telematics also works in tandem with Uptime Live, our powerful real-time tool for managing service, maintenance and repair work, to provide you with maximum vehicle efficiencies.

There is also the option for first notification of loss (FNOL) reporting that delivers instant support and insight into when, how and why accidents have happened.

Benefits of Telematics

- ✓ Reduction in insurance risk and cost
- ✓ Lower accident rates
- ✓ Improvements in fuel economy
- ✓ Reduced speeding incidents
- ✓ HMRC private and business mileage compliant
